

IBTA SC09 Speaker Presentation Abstract

Tom Hammond-Doel, LSI

Title: Senior Alliance Manager

Presentation: High Productivity Computing: The Past, Present and Future

Historically, HPC environments were characterized by early adopters of bleeding-edge technologies that offered raw performance over high reliability and remote replication capabilities. In stark contrast, the historic view of the enterprise is that of a conservative adopter of technology with the emphasis on reliability, interoperability and scalability over raw performance. This presentation will discuss how the convergence of the HPC and enterprise markets is impacting the demands on storage systems.
